

## Fire Protection System

Please read and discuss with all guests that may use the home.

### Smoke Detectors & Fire Alarms:

Smoke detectors and alarms will sound in your home only if you have smoke or a fire in your home including a smoldering fire, fireplace smoke, cooking or burning smoke, or steam from the bathrooms and this will not bring the Fire Department. Please open windows or doors and fan the smoke to outside until clear. **Do not open the door to the hallway as this will send the building into alarm and bring the Fire Department. You may be charged for a false alarm.**

### Heat Detectors and Fire Sprinklers:

The entire building will go into alarm if you have a fire in any room of your home that triggers the heat detectors. **Evacuate the building immediately.**

Fire sprinklers are activated by the heat of the fire one at a time and will tell the Fire Department where the fire is. Most Fire Sprinklers are concealed under covers or exposed if from a vertical surface, please do not interfere with these in any way.
